

CWA SCIENCE CLASSES

Concept With Abhishek | Class 9 — Maths

Chapter 1: Number System

1. Rational Numbers: Numbers of the form p/q where p, q are integers and $q \neq 0$.
2. Irrational Numbers: Numbers that cannot be expressed as p/q , e.g. root 2, root 3, π .
3. Real Numbers: The collection of rational and irrational numbers together, represented on the real number line.
4. Every real number can be represented by a unique point on the number line, and every point on the number line represents a unique real number.
5. Laws of Exponents for Real Numbers: $a^p \cdot a^q = a^{(p+q)}$; $(a^p)^q = a^{(pq)}$; $a^p / a^q = a^{(p-q)}$.
6. Rationalisation: Process of removing surds from the denominator by multiplying with the conjugate.
7. Successive Magnification: Method used to visualise the representation of numbers on the number line up to a certain decimal place.
